PROFILE

Frontend developer with more than 3 years of commercial experience, specialising in the Vue 3 / Nuxt 3 ecosystem. I build scalable applications with complex business logic and high load: multi-step booking flows, dynamic pricing calculators, catalogues and customer accounts.

I don't just write code — I dig into the product: I choose solutions against business metrics (conversion, performance, mobile UX). An advocate of strict typing (TypeScript) and of stability through automated testing (Playwright, Vitest).

I use AI as a working tool: Cursor, Claude Code and MCP are part of my everyday pipeline, local models via Ollama, and AI functionality shipped into products through the Gemini and OpenAI APIs. I set up project rules (.cursor/rules) for shared code standards, test autogeneration and consistent architectural patterns across the team. Experienced in launching projects from scratch: stack selection, infrastructure setup, laying a scalable foundation.

EXPERIENCE

Frontend Developer — TrustyOne

April 2024 — February 2026 · Middle → Middle+ (promoted within the company)

Full-cycle agency for the travel and event sector. Several client projects in parallel.

- Frontend architecture design and greenfield project launches: stack selection, structure, quality standards.
- Mentoring: guided the growth of 2 junior developers — task distribution, code review, backlog prioritisation.
- Introduced a comprehensive testing strategy (Unit / Integration / E2E — Playwright, Vitest), which noticeably improved release stability.
- Set up CI/CD pipelines and auto-deploy scripts for dev/prod environments (Bitbucket Pipelines).
- Fully migrated the codebase to TypeScript with strict typing — fewer runtime errors.
- Consistently high scores across all 4 Core Web Vitals metrics: Performance, Accessibility, Best Practices, SEO.
- Close collaboration with the backend team: shaping API contracts, faster integration and more stable releases.

KEY PROJECTS

- **DLI (Deluxe Limo Italy)** — TravelTech platform for online booking of transfers and tours across Italy: multi-step booking flow, Stripe and Zoho CRM integrations, complex dynamic pricing logic. Designed a multi-brand monorepo architecture: a single codebase serves 3 brands through environment configuration (VITE_PROJECT_ALIAS), removing code duplication when launching new brands. Designed and documented the end-to-end integration flow Lead → Deal → Payment (Zoho CRM + Stripe Payment Links), including a separate abandoned-cart recovery branch via discounted email links.
- **Eventner** — EventTech marketplace of event venues (banquet halls, lofts): search and filtering, venue cards, online booking scenarios, SEO-oriented pages. Interactive event calendar (FullCalendar), SEO setup (sitemap module) and PWA configuration, server-side image optimisation (sharp).
- **Inspiritaly** — TravelTech platform for exclusive tours and experiences in Italy: catalogue, tour page, cart, checkout, customer account, Core Web Vitals and SSR/ISR optimisation. Built a multi-factor dynamic pricing engine (hourly rates, overtime discounts, garage-distance surcharges, tariff surcharges by number of participants, fallback logic with no route) with formalised business-logic documentation.
- **Travel 2025** — mobile-first EventTech platform for an international travel forum: interactive map, activity programme, participant and discount catalogues, quests and personal itinerary building, client-side export of itineraries and data to PDF (html2canvas + jsPDF).

Frontend Developer — Paleo studio

November 2022 — January 2024 · Junior → Middle

A studio with varied client projects — from promo sites to internal services.

- **Logistics platform** — built the logistics management interface on Vue 2 and Vuetify.
- **Silkway Rally participant account** — interactive interface for participants with dynamic tables and charts.
- **Nightclub information portal** — responsive, SEO-optimised website.
- **Journalism website** — content builder for the admin panel.
- **Browser extension** — automated cover-letter generation for job applications.

EDUCATION

MUIT — Programmer degree, 2020–2024

Continuous self-study of the modern stack (Vue 3, TypeScript, AI development tools) — no formal courses.

SKILLS

Frameworks: Vue.js 3 (Composition API, Script Setup), Nuxt 3 (SSR/Hybrid), Vue.js 2, React, Express

Languages: TypeScript (strict typing), JavaScript (ES6+), Node.js

State management: Pinia (migration experience), Vuex, Redux

AI tools: Cursor, Claude Code, MCP (Model Context Protocol), Ollama (local models); automation and text generation via the Gemini API and OpenAI API

Testing and quality: Playwright (E2E and visual regression testing), Vitest, Jest; ESLint, Prettier, Husky, Lint-staged

Form validation: VeeValidate + Yup

Security: DOMPurify (user-content sanitisation)

Monitoring: Sentry (in production), Yandex Metrica

Performance: nuxt-vitalizer, sharp (server-side image optimisation)

Data export: html2canvas, jsPDF, PDF generation

Build and infrastructure: Vite (advanced configuration and bundle optimisation), Webpack, Git (GitHub/GitLab Flow), Docker, Bitbucket Pipelines (CI/CD), PWA, Figma

Integrations: Stripe, Zoho CRM API, RESTful API, Swagger, Postman

UI and styling: Tailwind CSS (v3/v4), SCSS, PostCSS, CSS Modules; PrimeVue, Vuetify, Swiper.js, Quasar, Inspira

Visualisation and maps: Mapbox GL JS, Google Maps API, Yandex Maps API, FullCalendar

PET PROJECTS

Browser extension for automated job applications with cover-letter generation · Figma-to-Vue component converter · CRM with auto-replies via the Gemini API

LANGUAGES

Russian — native

English — A2 (basic)
