SUMMARY

Frontend developer with 3+ years of commercial experience, specializing in the Vue 3 / Nuxt 3 ecosystem. I build scalable applications with complex business logic and high load: multi-step booking flows, dynamic pricing calculators, catalogs and personal dashboards.

I don't just write code — I get into the product: choosing solutions based on business metrics (conversion, performance, mobile UX). I favor strict typing (TypeScript) and reliability through automated testing (Playwright, Vitest).

I use AI as a working tool: Cursor, Claude Code and MCP are part of my daily pipeline, local models via Ollama, AI features integrated into products via the Gemini and OpenAI APIs. I set up project rules (`.cursor/rules`) for consistent code standards, test autogeneration, and shared architectural patterns across the team. I've launched projects from scratch: stack selection, infrastructure setup, laying a scalable foundation.

EXPERIENCE

Frontend Developer — TrustyOne

Apr 2024 — Feb 2026 · Middle → Middle+

Full-cycle agency for the travel and event industry. Worked on several client projects in parallel.

- Designed frontend architecture and launched projects from scratch: stack selection, structure, quality standards.
- Mentorship: guided the growth of 2 junior developers — task distribution, code review, backlog prioritization.
- Introduced a comprehensive testing strategy (Unit / Integration / E2E — Playwright, Vitest) that noticeably improved release stability.
- Set up CI/CD pipelines and auto-deploy scripts for dev/prod environments (Bitbucket Pipelines).
- Worked closely with QA, PM, and — on some projects — directly with the client and designer: clarified ambiguous requirements before development started, avoiding rework after review.
- Proposed alternative technical solutions for product tasks to the business — e.g. an abandoned-cart recovery flow via a discounted email link, reducing losses at checkout.
- Took part in choosing architecture and stack at the start of new client projects together with the PM — aligning technical constraints (timeline, integrations) with business requirements before development began.
- Consistently high scores across all 4 Core Web Vitals metrics: Performance, Accessibility, Best Practices, SEO.
- Close collaboration with the backend team: API contract design, faster integration, release stabilization.

KEY PROJECTS

DLI (Deluxe Limo Italy) — a TravelTech platform for booking transfers and tours across Italy: multi-step booking flow, Stripe and Zoho CRM integrations, complex dynamic pricing logic (hourly rates, overtime discounts, garage-distance surcharges, group-size rate tiers, no-route fallback logic) with formalized business-logic documentation. Designed a multi-brand monorepo architecture: one codebase serves 3 brands via environment configuration (`VITE_PROJECT_ALIAS`), eliminating code duplication when launching new brands. Designed and documented an end-to-end Lead → Deal → Payment integration flow (Zoho CRM + Stripe Payment Links), including a separate abandoned-cart recovery flow via discounted email links.

Eventner — an EventTech marketplace for event venues (banquet halls, lofts): search and filtering, venue cards, online booking flows, SEO-oriented pages. Interactive event calendar (FullCalendar), SEO setup (sitemap module) and PWA configuration, server-side image optimization (sharp).

Travel 2025 — a mobile-first EventTech platform for an international travel forum: interactive map, activity program, participant and discount directories, quests, and personal route building; client-side route and data export to PDF (html2canvas + jsPDF).

Frontend Developer — Paleo studio

Nov 2022 — Jan 2024 · Junior → Middle

A studio with diverse client projects — from promo sites to internal tools.

- **Logistics platform** — built a logistics management interface on Vue 2 and Vuetify.
- **Silkway Rally personal dashboard** — interactive interface for participants with dynamic tables and charts.
- **Nightclub information portal** — responsive, SEO-optimized site.
- **Journalism site** — content builder for the admin panel.
- **Browser extension** — automated cover-letter generation for job applications.

EDUCATION

MUIT — Information Systems and Technology, 2020–2024

Continuous self-directed study of the modern stack (Vue 3, TypeScript, AI development tools) — no formal courses.

SKILLS

Frameworks: Vue.js 3 (Composition API, Script Setup), Nuxt 3 (SSR/Hybrid), Vue.js 2, React, Next.js, Express

Languages: TypeScript (strict typing), JavaScript (ES6+), Node.js

State management: Pinia (migration experience), Vuex, Redux, Zustand

AI tools: Cursor, Claude Code, MCP (Model Context Protocol), Ollama (local models); automated content generation via Gemini API and OpenAI API

Testing & quality: Playwright (E2E and visual regression testing), Vitest, Jest; ESLint, Prettier, Husky, lint-staged

Form validation: VeeValidate + Yup, Zod

Security: DOMPurify (user content sanitization)

Monitoring: Sentry (used in production), Yandex Metrika

Performance: nuxt-vitalizer, sharp (server-side image optimization)

Data export: html2canvas, jsPDF, PDF generation

Build & infrastructure: Vite (advanced config and bundle optimization), Webpack, Git (GitHub/GitLab Flow), Docker, Bitbucket Pipelines (CI/CD), PWA, Figma

Integrations: Stripe, Zoho CRM API, RESTful API, Swagger, Postman

UI & styling: Tailwind CSS (v3/v4), SCSS, PostCSS, CSS Modules; PrimeVue, Vuetify, Swiper.js, Quasar, Inspira

Maps & visualization: Mapbox GL JS, Google Maps API, Yandex Maps API, FullCalendar

SIDE PROJECTS

Browser extension for automated job-application cover letters · Figma-to-Vue component converter · CRM with auto-replies via Gemini API

LANGUAGES

Russian — native

English — A2 (basic)
