ABOUT

Frontend developer with 3+ years of commercial experience, specialising in the Vue ecosystem (Vue 2 and Vue 3) and Nuxt 3. I build scalable applications with complex business logic and heavy load: multi-step booking flows, dynamic pricing calculators, catalogues and customer portals.

My standard project stack: Composition API and Options API, Pinia, Vue Router, VueUse. On Nuxt I work with SSR/SSG and server middleware (auth guards, request logging). Markup and styling: CSS3, SCSS, PostCSS.

I don't just write code — I dig into the product: I pick solutions against business metrics (conversion, performance, mobile UX). A firm believer in strict typing (TypeScript) and in stability through automated testing (Playwright, Vitest).

AI is a working tool for me: Cursor, Claude Code and MCP are part of my everyday pipeline, local models via Ollama, AI features shipped into products through the Gemini and OpenAI APIs. I set up project rules (.cursor/rules) for consistent code standards, test autogeneration and adherence to architectural patterns across the team. Experienced in launching projects from scratch: choosing the stack, setting up infrastructure, laying a scalable foundation.

EXPERIENCE

Frontend Developer — TrustyOne

April 2024 — February 2026 · Middle → Middle+

Full-cycle agency for the travel and event sector. Worked on several client projects in parallel.

- Frontend architecture design and launching projects from scratch: stack choice, structure, quality standards.
- Mentoring: guided the growth of 2 junior developers — task distribution, code review, backlog prioritisation.
- Introduced an end-to-end testing strategy (Unit / Integration / E2E — Playwright, Vitest), which noticeably improved release stability.
- Set up CI/CD pipelines and auto-deploy scripts (Bitbucket Pipelines, GitLab CI) for dev/prod environments.
- Worked closely with QA and PM, and on some tasks directly with the client and designer: resolved ambiguous requirements before development started, which eliminated rework after review.

- Proposed alternative technical solutions for product problems — for example, an abandoned-cart recovery branch via a discounted email link, reducing drop-off at the payment step.
- Took part in choosing architecture and stack at the start of new client projects together with the PM — aligned technical constraints (deadlines, integrations) with business requirements before development began.
- Consistently high scores across all 4 Core Web Vitals categories: Performance, Accessibility, Best Practices, SEO.
- Close collaboration with the backend team: working through API contracts, faster integration and more stable releases.

KEY PROJECTS

DLI (Deluxe Limo Italy) — a TravelTech platform for online booking of transfers and tours across Italy: a multi-step booking flow built on Vue 3 / Nuxt 3 with SSR, Stripe and Zoho CRM integrations, complex dynamic pricing logic (hourly rates, overtime surcharges, garage-leg markups, per-passenger tariff markups, fallback logic with no route) with formalised business-logic documentation. Designed a multi-brand monorepo architecture: one codebase serves 3 brands through environment configuration (VITE_PROJECT_ALIAS), which removed code duplication when launching new brands. Designed and documented the end-to-end Lead → Deal → Payment integration flow (Zoho CRM + Stripe Payment Links), including a separate abandoned-cart recovery branch via discounted email links.

Eventntr — an EventTech marketplace for event venues (banquet halls, lofts): search and filtering, venue cards, online booking scenarios, SEO-oriented pages. Interactive event calendar (FullCalendar), SEO setup (sitemap module) and PWA configuration, server-side image optimisation (sharp).

Travel 2025 — a mobile-first EventTech platform for an international tourism forum: interactive map, activity programme, participant and discount catalogues, quests and personal route building, client-side export of routes and data to PDF (html2canvas + jsPDF).

Frontend Developer — Paleo studio

November 2022 — January 2024 · Junior → Middle

A studio with a wide range of client projects — from promo sites to internal services.

- **Logistics platform** — built the logistics management interface on Vue 2 and Vuetify.
- **Silkway Rally participant portal** — an interactive interface for participants with dynamic tables and charts.
- **Nightclub information portal** — a responsive, SEO-optimised website.
- **Journalism website** — a content builder for the admin panel.
- **Browser extension** — automated cover-letter generation for job applications.

EDUCATION

MUIT — Information Systems and Technologies, 2020–2024

Continuous self-study of the modern stack (Vue 3, TypeScript, AI development tools) — no formal courses.

SKILLS

Frameworks: Vue.js 3 (Composition API, Script Setup), Nuxt 3 (SSR/Hybrid), Vue.js 2, React, Next.js, Express

Languages: TypeScript (strict typing), JavaScript (ES6+), Node.js

State management: Pinia (migration experience), Vuex, Redux, Zustand

AI tools: Cursor, Claude Code, MCP (Model Context Protocol), Ollama (local models); automation and text generation via the Gemini API and OpenAI API

Testing & quality: Playwright (E2E and visual regression testing), Vitest, Jest; ESLint, Prettier, Husky, lint-staged

Form validation: VeeValidate + Yup, Zod

Security: DOMPurify (user content sanitisation)

Monitoring: Sentry (in production), Yandex Metrika

Performance: nuxt-vitalizer, sharp (server-side image optimisation)

Data export: html2canvas, jsPDF, PDF generation

Build & infrastructure: Vite (advanced configuration and bundle optimisation), Webpack, Git (GitHub/GitLab Flow), Docker, Bitbucket Pipelines (CI/CD), PWA, Figma

Integrations: Stripe, Zoho CRM API, RESTful API, Swagger, Postman

UI & styling: Tailwind CSS (v3/v4), SCSS, PostCSS, CSS Modules; PrimeVue, Vuetify, Swiper.js, Quasar, Inspira

Visualisation & maps: Mapbox GL JS, Google Maps API, Yandex Maps API, FullCalendar

PET PROJECTS

Browser extension for automated job applications with cover-letter generation · Figma-design-to-Vue-component converter · CRM with auto-replies via the Gemini API

LANGUAGES

Russian — native

English — A2 (basic)

TECHNICAL STACK

Core: Vue 2/3, Nuxt 3/4 (SSR/SSG, server middleware), Composition API, Options API, Pinia, Vue Router, VueUse

Languages: JavaScript (ES2015+), TypeScript

Testing: Vitest, Vue Test Utils, Playwright

Styling: CSS3, SCSS, PostCSS

Tooling: Vite, Webpack, Git, CI/CD (Bitbucket Pipelines, GitLab CI), REST API

AI tools: Cursor, Claude Code, MCP, Ollama, Gemini/OpenAI API
